PROFESSIONAL SUMMARY

Senior Software Engineer with over 6 years of proven experience in architecting, developing, and deploying scalable, end-to-end web and mobile applications. Expertise in system architecture, CI/CD pipelines, and cloud infrastructure (GCP, AWS). A dedicated technical leader and mentor committed to writing clean, testable code and driving significant improvements in system performance, reliability, and cost-efficiency.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, Python, SQL, Kotlin, Dart
- **Frameworks:** React, Next.js, Vue.js, NestJS, React Native, FastAPI, PyTorch, Flutter
- **Tools & DevOps:** Docker, Kubernetes, Terraform, Argo CD, Prometheus, Grafana, Jest, Git
- **Platforms:** GCP (GKE, Cloud Run, Cloud Functions), AWS, Firebase, Vercel
- **Core Competencies:** Cross-Functional Collaboration, Team Mentoring, System Architecture, Technical Leadership, Excellent Communication

WORK EXPERIENCE

Senior Software Engineer | TICTAG (tictag.io) March 2022 – Present

- **Technical Leadership:** Owned the end-to-end architecture for mobile and web products serving 100K+ active users.
- **System Reliability:** Authored clean, modular code and API contracts that reduced bug reports by 35% and improved application stability by 40%.
- **Complex Problem Solving:** Resolved critical distributed system issues, including race conditions, concurrency, and offline synchronization.
- **Velocity Optimization:** Engineered CI/CD pipelines and automated testing suites, achieving 2x faster deployment cycles.
- **Mentorship:** Mentored 3 junior engineers on best practices for mobile development and high-level system design.

IT Consultant (Freelance) | RAIGINE January 2025 – February 2026

- **Cloud Infrastructure:** Architected scalable environments on GKE and Cloud Run, reducing deployment times by 40%.
- **Cost Efficiency:** Implemented IaC with Terraform, resulting in a 25% reduction in monthly cloud expenditure.
- **GitOps Automation:** Engineered robust pipelines using Argo CD and Cloud Build, decreasing manual intervention by 60%.

- Observability: Configured monitoring stacks (Prometheus/Grafana), shortening incident detection time by 50%.

Software Engineer | IMPORTIR.ORG *May 2021 – February 2022*

- High-Traffic Management: Developed an e-commerce platform handling 10K+ daily transactions with 99.5% uptime.
- Performance Engineering: Integrated Redis caching and WebSockets, improving API response times by 45%.

Web Developer | LATIHID *(October 2020 - January 2021)*

- Focused on front-end development using React to build core e-learning and e-commerce features comparable to Udemy.
- Developed key user-facing components, including landing pages, course browsing, and cart functionality, contributing to a 20% increase in course enrollments.
- Integrated third-party SDKs for chat and analytics, ensuring smooth real-time user interaction and engagement tracking.

PROJECTS

Domet Emas - Digital Gold Wallet | Lead Full-Stack Developer *(7 months)*

- Architected and developed a secure fintech platform for digital gold ownership, featuring real-time pricing and comprehensive transaction tracking.
- Implemented Firebase for real-time synchronization and atomic transactions in MongoDB, ensuring data integrity across concurrent buy/sell operations.
- Improved transaction processing speed by 40% through backend optimization, achieving seamless, low-latency balance updates.

AI Chat Application | Full-Stack Developer & AI Integration Specialist *(4 months)*

- Built an intelligent, real-time chat application integrating OpenAI's GPT models for context-aware responses and sentiment analysis.
- Implemented a Redis-based queuing system and optimized AI prompts, reducing AI processing response time by 60%.
- Successfully deployed for 3 enterprise clients, serving over 50K daily active users while maintaining sub-second message delivery.

Enterprise ERP System | Fullstack Developer & System Architect *(10 months)*

- Developed a comprehensive, modular ERP solution to centralize and automate finance, inventory, HR, and sales operations.
- Implemented a robust event-driven architecture using message queues to ensure absolute data consistency across distributed microservices.
- Reduced manual administrative tasks by 50% and improved cross-departmental data accuracy through strategic automation.

Anomali Coffee App - Omnichannel Platform | Fullstack Developer & Mobile Engineer (6 months)

- Engineered a digital ecosystem unifying online ordering, loyalty programs, and an in-store POS system for a major coffee shop chain.
- Adopted across multiple outlets with 10K+ active users; reduced customer wait time by 30% and increased repeat purchase rate by 45%.

Automation Web Platform | System Architect & Fullstack Developer (9 months)

- Architected a web-based automation system enabling secure, remote execution of Python scripts on client devices for business process optimization.
- Reduced repetitive manual processes by 70% across various departments, successfully handling hundreds of daily automated tasks.

EDUCATION

Universitas Pembangunan Nasional Veteran Jakarta - Jakarta, Indonesia *Bachelor of Information Technology (June 2018 - August 2022)*

CERTIFICATIONS

- Learn to Make Android Applications for Beginners | Dicoding Academy
- Getting Started with Kotlin Programming | Dicoding Academy
- Learn S.O.L.I.D Programming Principles | Dicoding Academy
- Certificate of Appreciation — Core Team Member (2020–2021) | Google Developer Student Clubs
